Assignment – 2:

Problem Statement

Follow the steps below to build the application:

1. Create a new component “reactive-form”
2. The form should display below mentioned fields:
 - Full name
 - Email
 - Address
 - City
 - Phone No
 - Password
 - Confirm Password
3. In the component, initialize the formGroup and FormControl instances
4. In the HTML template use reactive form directives to display the fields
5. Add the newly created component’s selector tag in the main template
6. Add a register button which when clicked displays the details filled in the form fields
7. Import ReactiveFormsModule from ‘@angular/forms’
8. Make use of CSS classes and Bootstrap to design the application

After building the application, prepare a ZIP file of the application code and upload it on LMS in Assignment solution section for evaluation.
