Module 9: Testing and Application Deployment in Angular

Assignment 2 – Create & deploy Angular application

edureka!

edureka!

Assignment – 2:

Problem Statement

Create Angular application and Deploy using Docker and Nginx

Follow the steps below to build the application:

1. Install docker for windows

2. Create new docker file

3. Build the application using ng build command

4. Create the docker image of the application

5. Push docker image to docker hub

6. Submit the final docker image with all test cases and test command running in the application

After building the application, prepare a ZIP file of the application code and upload it on LMS in Assignment solution section for evaluation.
